FAST AND FURIOUS

SLAP SHOT

ANIROG

ALL ACTION ICE HOCKEY

SLAPSHOT from Anirog is a two player, fast action ice hockey program. Also in this thrilling game there is included a smoothly running speech synthesis system of the very highest quality. Before the actual game starts each player must select an international hockey team to represent. After doing this you must quickly and skilfully manoeuvre your man across the glistening ice whilst your other team-mates move automatically around the rink waiting for you to pass the puck to them. If you do manage to race past the opposing defence then you have a chance to shoot for goal and score. However you still have the goalie to beat who is able to dive in all directions. Also included in this amazingly quick and totally original game is the ability to actually physically bodycheck your opponents. Never the less, do not be too aggressive otherwise you could incur a "roughing penalty", resulting in a faceoff in your own end, giving the opposing side an easy chance of scoring. Also other extra features available include: Pause mode and three levels of play ranging from fast to slow as well as a re-start option. Slapshot from Anirog is a totally original two player game with lightning fast action never seen before on the Commodore 64.

Two J S. Commodore 64 Cassette £8.95 Disk £10.95

Commodore joins price war

Commodore rolled up it's sleeves to join in the price war last week, with the announcement of a massive 50 per cent reduction in the price of the Plus/4

The Plus/4, Commodore's newest model, has been slashed from £299 99 The machine is a competitor of the QL and the BBC, but weighing in at £149 99, it's now a much more attractive prospect

The Plus/4 has 64K memory, of which 60k is usable Howard Stanworth, Commodore UK general manager, said 'At £150 we're offering the public a really powerful and versatile computer at a price which until now has only applied to machines designed for first-time buyers '

'We think at this price the Plus/4 is head and shoulders above it's rivals.'

Commodore has no plans to cut the prices of the C16 or C64, according to a company spokesman

Commodore's move follows Acorn's announcement of a £70 price cut for the Electron, and Sinclair's repricing of the Spectrum Plus at £129 — a £50 reduction The Plus/4 now offers good value for money at just £21 more than both these 'beginner's' machines

And the price cut was one more move in a week full of drama and crisis, headed by the suspension of trading on Acorn shares The price war reflects the turbulence in the computer industry pre Christmas sales were disappointing for a number of machines, and new pricing strategies are aimed to shift stock and sharpen up the competition

Commodore UK, 1 Hunters Way Weldon, Corby, Northants NN17 1QX

PSS is about to release it's first titles for the Amstrad Frank 'N' Stein and Battle for Midway

Frank 'N' Stein is a 50 level platform game in which players must collect parts of Frank's body. Battle for Midway is a computer version of the World War II Battle in the Pacific

Frank 'N' Stein will be handled by Amsoft and will cost £8 95, and Battle for Midway will be dealt with by PSS at a price of £9.95

PSS, 452 Stoney Stanton Rd, Coventry CV6 5DG

Chess champion

Ten-year-old David Essex from Lincolnshire has won the Make your Move chess championship

This was the first ever contest in which the players didn't leave their schools to play the matches All games were played on BBC machines linked to Ceefax, the BBC's Teletext service

This had the added advantage that anyone with a suitable television could watch the games as they were being played

The result wasn't too much of a surprise however David was the number one seed he's already the British under nine champion after just 18 months' playing experience

Scrabblesby primary school, which David attends, is the big winner The school received a BBC computer system including a teletext adaptor Runner-up was Cathy Haslinger from Hayes and her school have a new computer too

Over 6,000 primary schools throughout the country took part in the championship, which may now become an annual event because of its popularity

Acorn, Fulbourn Rd, Cherry Hinton, Cambridge

Staff oxed

Five Ways Software, a software house which deals exclusively in educational titles, has sacked eight of its staff, mostly programmers

Five Ways was set up by MEP, the Microelectronic Education Programme, but later went independent The MEP project is due to end this year and Tony Clements, Managing Director of Five Ways, said 'There are several reasons why we have had to take these measures The MEP project is ending and Longmans is pulling out of the software market ' Five Ways has produced several programs on commission for Longmans

Mr Clements also said that the general trends in the software market were not favourable to educational programs at present

Elizabeth Collins of Websters Distribution commented on the sales of educational titles, saying 'An educational best seller is only equivalent to a game at around number 50 in the charts ' She observed that an average title would have no chance of success 'To get anywhere at all an educational title must be very good indeed.' However, she believes that the educational side of the market is 'definitely steady'

Mr Clements was adamant that Five Ways is only suffering a temporary setback He said 'Five Ways is definitely not going down.'

Five Ways, Imperial House, Bourville Lane, Selly Oak, Birmingham

Coming soon...

Dragontorc of Avalon is to be the next adventure movie from Hewson Consultants

Based around the same style and format as Hewson's best-selling Avalon, there are some additional features

All the characters have a personality of their own and the whole race has an attitude to you For example, if you kill one member of a race the whole group will rapidly become your enemies

---

Each member of the race also has an individual response to you Some are more pleasant than others In all, it's a game in which you choose your role before you start to play

Whether you're Mr Nice Guy or Nasty Norah, you won't be able to find the game on the shelves until March 28th Perhaps you should start practising now

Hewson, Hewson Hse, 56b Milton Trading Est, Milton, Abingdon, Oxon OX14 4RX

First to crack Ket

Tom Frost of Montrose has carried away the prize for the first adventurer to complete the entire Ket trilogy

This involved playing three different games and solving hundreds of puzzzles He started the first of the games a year ago as soon as it was released After the release of the last part it took him three months to get past the five guardians.

Rex Taylor of Milton Keynes also cracked the game, but his

answer arrived whilst Tom's was being checked

Incentive often give a prize to the first player to finish it's puzzles and games The latest cassette is a licenced version of the Moon Cresta arcade game the winner of this competition will be given the actual arcade machine

Incentive appears to be slightly confused over the prize which will be offered with it's new game Confuzion A spokesman said: 'We haven't thought of anything for that one yet'

BBC, Commodore 64 and Dragon users can look forward to a year of mystery Incentive will soon be releasing versions of Ket for their machines

Incentive, 54 London St, Reading RG1 4SQ

Free upgrade

Oric's latest add-on will be supplied free to all Oric-1 and Atmos owners on request

This 'engineering improvement' is a protective cover for the expansion bus connector at the back of these machines It's major purpose is the prevention of power shorting due to careless insertion of the power lead, but it will also protect the interface from coffee, dust and other foreign bodies

Any owner who would like to have one of the new protectors should send a stamped addressed envelope to

Tansoft, Techno Park, Newmarket Road, Cambridge

Hey, good looking

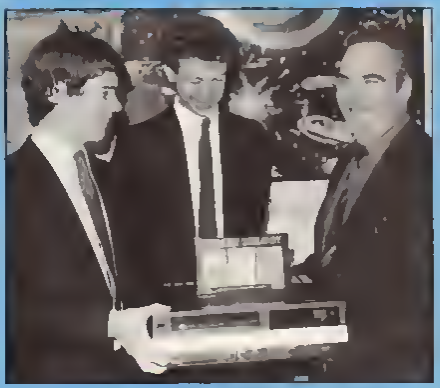

Good looks and 'optimised circuitry' are the star features of Binatone's new data recorder

The machine has a stand-up cassette slot which Binatone claims 'makes old shoebox-shaped' recorders look out of place next to today's computers'.

Two models will be available for machines accepting a standard cassette input lead, such as the Spectrum, BBC, Electron and MSX at £29.95, and a dedicated version for the Commodore VIC-20 and 64 models at £34.95

One feature is a monitor for audio verification of tapes, cue and review for fast winding to particular programs and a tape counter The aim is to take the guesswork out of buying a cassette recorder, as each model should give a perfect match to your computer

Binatone, Binatone House, 1 Beresford Avenue, Wembley, Middx

Tom Frost (right), first to crack the Ket trilogy

Treasure hunt

There's a £200 jewellery voucher to be won this week — plus games galore — in our

INTERCEPTOR SOFTWARE competition

Ever wanted to be rich beyond your wildest dreams, or wander the world in search of jewels? Well, we can't do anything about the riches and the world, but we can send you on a search for real jewels.

The week one lucky reader will win £200-worth of jewellery. The prize will be a voucher which can be exchanged at any branch of H Samuel. This means you can choose your own prize, to a value of £200, from H Samuel's range of gem encrusted merchandise.

There will also be 25 runners up who will each receive one of Interceptor's range of computer games. Owners of Spectrum and Amstrad machines will win a copy of Jewels of Babylon, priced at £5.50 and £6 respectively. C64 and VIC 20 owners will win an alternative title from Interceptor.

Interceptor's Jewels of Babylon for the Amstrad CPC464 and Spectrum computers, is a fascinating, adventurous romp through the Indian Ocean in search of Queen Victoria's lost jewel.

The jewel collection concerned was created 3,000 years ago by a skilled Babylonian craftsman. It was brought to Britain and then sent as a present to an Indian princess on the occasion of her wedding. During the journey from Africa to India the ship was attacked by pirates and you are the sole survivor from the crew.

Taking a vow to recover the lost gems you set off by ship to the island which the pirates use as their base. This is where the game starts. You have to find your way past a whole host of nasty creatures and devious puzzles before you can meet the sleeping pirate.

You will encounter lions, fish, spears, fruit — poisoned, of course — a talking parrot, crowbars and the pirates themselves. What's more, you must find a different way back once you have the treasure in your hands.

Our competition is at least a little easier. All you have to do is read this week's HCW carefully. As you do so you will see a number of jewel symbols like the one on this page. To win this week's prize you must count the number of jewels, including the one on this page, and enter this number on the coupon.

All entrants are eligible to join the Interceptor Software club at no charge. You will then be sent a free poster and a regular newsletter containing competitions, discount offers and full news of Interceptor's expanding range. This offer is available to everyone entering, but, if you don't wish to accept, please indicate on the entry coupon.

How to enter

Look at the jewel symbol on this page. It's very distinctive and there are others exactly the same scattered throughout this week's HCW.

Go carefully through the magazine and count all the jewel symbols you can find. When you are sure you have found them all, fill in the number on the entry coupon.

Complete the coupon clearly and fully — if you are a winner it will be used as a label. Send the coupon to us.

Important: write the number of jewel symbols you find on the back of your envelope.

Send your entry to Interceptor Software Competition, Home Computing Weekly, No 1 Golden Square, London W1R 3AB. Closing date is first post on Friday 8 March, 1985.

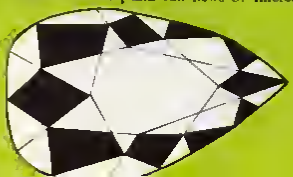

You may enter as many times as you wish, but each entry must be on an official coupon — not a copy — and sealed in a separate envelope.

Prizes will arrive from Interceptor Software within 28 days of the publication of the results of the competition.

The rules

Entries will not be accepted from employees of Argus Specialist Publications, Interceptor Software and Alabaster Passmore & Sons. This restriction also applies to employees, families and agents of the companies.

The How to Enter section forms part of the rules.

Closing date: first post Friday 8 March, 1985. Don't forget to follow carefully the advice in the How to Enter section, including writing the number of jewels found on the back of your envelope.

The making of 4 Computer Buffs

Genevieve King reports on behind the scene action at Channel 4's newest computer programme

Channel 4's new computer series is now well under way Entitled 4 Computer Buffs, it is described by Channel 4 as a programme for the 'serious computer user' Home Computing Weekly was invited to sit in on the rehearsals for the first programme

The series is being produced by the team responsible for Thames Television's Database and viewers will already have recognised many familiar faces Presented by Magpie veteran Tony Bastable, the rehearsals took on a very professional feel, although there were some hiccups

Tony is assisted by Jane Ashton and Dr Mike Thornes, while computer journalist Guy Kewney deals with the news, views and comment section There is also a regular modem item presented by Ben Knox

Channel 4 describes 4 Computer Buffs as a series which is 'tailored for the serious home computer user' At the rehearsal Tony Bastable was heard to remark jokingly "This is Database with absolutely incomprehensible content"

Hopefully, home computer users won't have cause to agree with this!

According to Channel 4, the programme is aiming to report on the latest in new technology and features many practical demonstrations of how home computer users can utilise the full potential of their micros

During the series there will be a number of television innovations These include the first ever transmission of software, the first interactive bulletin board and the first TV comparative bench test for hardware The series will also launch Prestel's new school service, Schoolink

The light transmission of software was featured in the first programme of the series Viewers were shown how to assemble a light pen which can read data off a flashing light at the corner of the screen The process, described as telesoftware via light pen, was certainly a first, and Channel 4 seems very conscious of the pioneering nature of the series

The interactive bulletin board will the most lasting aspect of the series, since it is to continue after the seven half hour programmes come to an end in a few weeks' time It is an addition to the teletrome direct mailbox to the production office, which has already proved popular with followers of the Database series It is being organised through the Nottingham Building Society's mainframe computer and can be contacted on Prestel 7776

The bulletin board will provide news, not only about the programmes, but also concerning general subjects of interest to the computer user It will also enable users to contact each other with information about ideas and activities Channel 4 is also hoping that the bulletin board will provide a forum for debate on subjects which are important to those involved in the computer industry

The comparative bench test which has been devised for television by David Tebbut is another revolutionary item Spotlighting BBC, Amstrad CPC464 and QL computers at first, each machine is dealt with in seven minutes of viewing time, although many hours of research are said to have gone into the feature

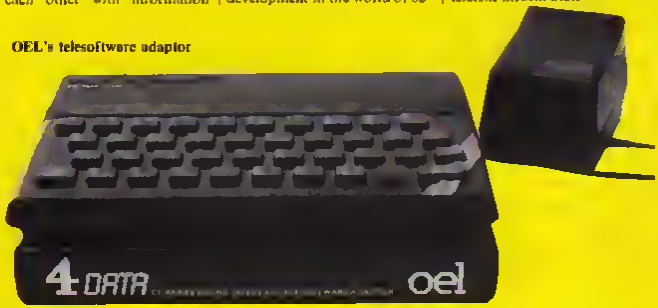

The programme will also preview an important development in the world of so-called telesoftware 4-Tel is Channel 4's equivalent of Oracle, the ITV teletext service In a few weeks' time the new 4-Tel service will begin transmitting software which can be downloaded by users Users will need a new decoder, developed by OE Limited It is called the 4-Data adaptor and at first will be available for the 48K Spectrum only, although versions for other popular micros will follow soon.

The adaptor is endorsed by Channel 4 and allows users to receive not only teletext information from 4-Tel, Oracle and Ceefax, but also the free software that is to be broadcast by the 4-Tel service. According to OE Limited, it has been designed to fit neatly under the Spectrum and includes special features which enable you to store teletext information on microdrives and print the data using a Spectrum compatible printer

Transmission of telesoftware will be broadcast on Channel 4 on Tuesday mornings between 10 and 10 30 and 11 and 11 30 am This will consist of commercial software which can be downloaded using the OEL adaptor, and the programs will be accompanied by rolling teletext information

OEL's telesoftware adaptor

3D Star Strike 48K Spectrum

Real Time Software

When I first saw this I was less than impressed but as I played it a little more it started to grow on me and my fellow players It is a space battle game with three distinct phases

In the first you are speeding through the galaxy to take on your enemy at his home base You have to destroy the enemy ships whilst in the same time avoiding their fire

The second phase has you flying over the planet surface to destroy enemy buildings On the third you approach the enemy power plant through a duct and avoid catwalks that are at various levels around you

Finally, there is the power plant to destroy This takes great skill by The game's last the graphics based on wire frame animation are good and interesting and there is some variety between the different screens having said that I feel that this isn't one of those games that I would want to play again and again Perhaps I'm just getting old and jaded with all this killing in space D C

3D Lunattack C64 £7.95

Hewson Consultants 56B Milton Trading Est, Milton Abingdon, Oxon OX14 4RX

This is a sort of flight simulator, as you would expect from Hewson You fly around the moon attacking the Seiddab land and air forces while protecting your own fuel base It is very complicated, and a chance at the instructions would be enough to put off anyone but a real enthusiast which I must confess I am not

There is a lunar map which shows your position and the enemy's Unfortunately it is difficult to tell which is which Your craft can operate in three different modes, determined by the shape of your ship square octagonal or diamond shaped It's difficult to start the right mode the craft swivelled from one to another by means beyond my control

There are seven enemy weapons systems hard to identify and harder to shoot There are also lunar mountains and craters I wasted time trying to shoot these having mistaken them for tanks

Overall I felt the graphics were not good enough to make a game of this complexity workable — but you may well disagree M N

Space blasters

Space games galore. Five alien blasting games for the addict

Moon Cresta 48K Spectrum £6.95

Incentive, 54 London St Reading RG1 4SQ

If you like the arcade game you'll love this Spectrum version Incentive have bought the rights and has produced a version as close to the original as possible in the Spectrum

For those not familiar with Moon Cresta, the game involves blasting successive sheets of aliens that are trying to destroy you However the aliens don't just sit there and if you shoot them, they rush around the screen in circular patterns and will also dodge bullets if they can Once a certain number of sheets have been exterminated the player gets a chance to dock his section of ship with the next section If he is successful the new ship has increased fire power. This can be done twice at which stage the ship fires five bullets at once!

Naturally the aliens also get faster, dodge more and even split into two when hit

The program is well done with very fast action and impressive graphics It has a colourful loading screen that is replaced by a menu that has Icons' rather like those used on expensive business machines The menu gives the player the choice of keyboard control or any of the major joystick interfaces J G D

Space Shuttle C64 £9.99

Activision C64 Hse Goldings Hill Loughton, Essex IG10 2RR

This is a very realistic simulation of a space shuttle flight It has been designed after close consultation with NASA and incorporates many features You are provided with a 31 page Flight Manual specifying how you fly the shuttle This is very well produced and contains high quality colour pictures of the screen displays A cardboard overlay is provided to customise the function keys

There are three flight modes Mode 1 gives a demo of a complete space flight from take off to re-entry and touch down During this you can exercise limited control via the joystick but the computer overrides most of the mission is completed still In Mode 2 you have unlimited fuel and the onboard computers can take over Mode 3 is a full fledged flight

During launch the screen vibrates and shakes on attaining the correct altitude you set up a stabilising orbit and try to dock with a satellite You then start the de-orbit burn and attempt re-entry finally touching down

The flight simulator to end all flight simulators L C

Defend or Die Amstrad CPC464 £7.95

Alligata, 1 Orange St Sheffield S1 4DW

Earth is being invaded by aliens whose aim is to abduct your fellow human beings At the helm of your trusty starfighter you skim the planet's surface picking off the alien craft as they kidnap your comrades and head for outer space

Even when an alien has a human in his grasp, all is not lost One clean shot between the eyes will dispatch the green scumbag but it will also leave the human to fall to his death Using your last ounce of your flying skills you intercept the man in mid-air and return him safely to the ground gaining 1000 points in the process

The scrolling action that has become the trade mark of Defender is executed impeccably and the characters are identical to the originals One of the Alligata's own trade marks is the excellent use of the Amstrad's stereo sound capabilities when paired with a stereo amplifier The ship dived for cover every time a starfighter unleashed a volley of electric death at the alien hordes

If there was ever a program that you should buy for your Amstrad then it has to be this one J B

HCW — present fut

HCW is 100 today! No telegram from the Queen, I'm afraid, but lots of good wishes from friends and readers, I hope. As the new editor of the magazine, the 100th issue seems an appropriate moment to look back at the past and tell you about our plans for the future.

Past

HCW burst on the streets on March 8, 1983, with a lead story about the challenge the new Dragon machine was posing to the (then) well-established Colour Genie. Interesting, isn't it, that just two years later both of these machines have had great troubles and seem to have vanished from today's home computer scene of today. I know there are lots of contented owners still using the machines, but it can't be claimed that the sales are earth shattering today.

Another feature of the first issue was an opinion column by Henry Budgett, then editor of Computing Today. In it he railed against the poor documentation often supplied with new computers and the number of bugs found in new machines. I have a feeling that I could run the piece again this week and it might be just as relevant. I'm sure that manufacturers have improved the care that they take over such details, but there are still machines being released to an unsuspecting public with little niggles and bugs waiting to be cleared up.

On to the present...

I was working for the magazine even before it's first issue. I had been asked to write my first software reviews and articles a couple of weeks before the first issue appeared and was very excited by the prospect of a weekly magazine featuring news, software reviews and programs. The emphasis was always that HCW would be the first and best magazine for software. We have featured more software reviews in a week than most monthlies can manage in three months.

Another feature of HCW at it's launch, which we still adhere to today, is it's emphasis on **home** micros. The magazine doesn't flirt with business machines or programs. We feel our readers are interested in games, educational and utility programs, but don't want to know about the best spreadsheet since the duvet was invented.

Many things have changed since the first issue. The industry has certainly changed a great deal. The BBC, VIC-20 and Spectrum were with us then, but the Commodore 64, Amstrad, Atari XL and the Electron were just twinkles in their designers' eyes. Software was mainly sold by mail order and computers usually came from specialist shops. Now 25 per cent of all computers are sold by one high street retailer with the other multiple stores making over 50 per cent of the market. Quite a change, I'm sure you'll agree.

HCW hasn't remained unchanging over this period either. Issue 29 was the first to feature a full colour cover and had the cassette cards of reviewed software splashed

· past, nt and ure

HCW Editor Dave Carlos takes a look back at the first 100 issues. He compares HCW at its birth with its centenary, and reveals exciting plans for the future

across the front This continued for a year until Sinclair surprised us all by releasing the Spectrum Plus This was so important that for the first time HCW had a piece of hardware across it's cover About a month later it was decided that the logo needed a brush-up and today's logo was seen for the first time This isn't the final change, though

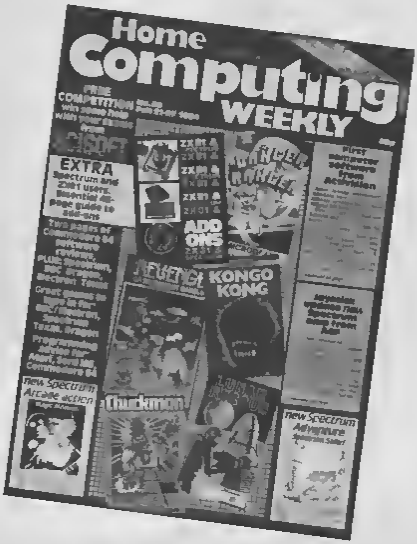

Coming soon

Issue 102 is the start of something really new HCW is to be completely redesigned and relaunched on March 5, 1985, just two years after the first issue

Those who read regularly will know that last Autumn we had a reader's survey so that we could know what our readers wanted from a magazine like ours In response to this, things are really changing at HCW

The new magazine will look very different, new cover, new page designs and a whole host of new features There will still be plenty of news, software reviews and programs for you to type in, but just look at the list of new regular features

There will be a new Readers' Page with puzzles, comments, jokes and hi scores, including photographs of the best players We really need your ideas for this one; which games do you want us to include? Do you know any funny jokes or computer stories Are you the best dragon slayer in the town? If you are, then we need to hear from you soon

Hardware and peripherals are becoming more important as people keep their micros longer and want to extend the ways in which they use them Although we have had occasional reviews of these products we will be featuring a whole page of reviews each week in future We occasionally have letters asking us to review certain items, but we would like more If there is a product you would like us to review, tell us about it We aim to please!

The software review pages will be looking different too There will be longer reviews of star programs, and look out for Dauntless Dave In the future Dave will be telling you just what he thought of all the new programs He tends to react in rather strange ways to the programs he sees but more of him in Issue 102 By the way, BBC and Electron owners can have a sneak preview of Dave by typing in Jon Revis's program in this issue

There will also be changes to almost every other page in the magazine, but I daren't reveal too much at this stage The boss might realise how much all this will cost and then I'm in trouble

Make sure you don't miss your HCW each week Order it from your newsagent or by post from the address on the contents page

P.S. Want to save money on software? Or do you want an obedient robot of your own?

Issue 102, at your newsagent on 5th March, has offers that you won't want to miss!

PROGRAMMERS

WE ARE LOOKING FOR TOP QUALITY PROGRAMMES TO MARKET IN THE UK AND EUROPE. THESE PROGRAMMES MUST BE OF TOP QUALITY MACHINE CODE WITH GOOD GRAPHICS AND SOUND. WE ARE CURRENTLY CONCENTRATING ON THE COMMODORE 64 AND SPECTRUM MACHINES BUT CAN HELP WITH OTHER MICROS. WE CAN SUPPLY THE DEVELOPMENT TOOLS AT NO EXTRA COST. MIRAGE WILL OFFER ROYALTIES OF UP TO 25% OF THE RECEIPTS ON GAMES ACCEPTED FOR THE LABEL WHICH WE WILL PROMOTE VIGOROUSLY IN THE MARKET. WE OFFER AN EXCELLENT ENVIRONMENT IN WHICH TO DEVELOP YOUR GAMES WITH MODERN MACHINES AND FULL SUPPORT FROM OUR SOFTWARE DEPARTMENT. WE ARE ALWAYS LISTENING TO NEW IDEAS SO GIVE US A CALL.

100th ISSUE

1984 hi-score

This week our experts look at Amstrad and Oric games: the best and the worst are all here

The Oric has been neglected by the large software houses in favour of more popular micros such as the Spectrum and the Commodore 64. Therefore there aren't any games which could be classed as mega-games for the Oric. However, that doesn't mean there aren't any good games. It's been hard, but the good (and the not so good) games released during 1984 have been grouped together here.

Game of the year

In all honesty, there weren't many contenders for this title. I considered the Oric classic Xenon-1, but it was released too long ago. The only other game deserving this title was a strategy game called Classic Racing by Salamander. This may come as a surprise for those who've never seen it, since strategy games are, on the whole, awful! This particular title is an exception. It has brilliant graphics, beautiful animation and, of course, you need to think!

Best shoot-'em-up

It was difficult to decide which game should receive this title, because there are quite a few fantastic shoot 'em-ups, for instance Xenon-1, Mare, Defence Force and Hellion to name but a few. They are as good as each other, but I decided to award the title to Hellion by Orpheus, purely because the others will be mentioned in other sections. Hellion, with it's very professional presentation, detailed characters, awesome speed and a mind-boggling 101 screens, certainly deserved this title.

Best adventure

With a relatively large RAM capacity, the Oric is in fact very suited for adventure games, but all the best adventures seem to be written for the Spectrum! One software house renowned for the quality of it's adventures is Level 9. Level 9 is supporting the Oric with it's massive, but logical adventures. Probably my favourite is Colossal Adventure. Another adventure worth a mention is The Hobbit by Melbourne House. It certainly supports one of the best sentence analysers, and the graphics are stunning.

Most difficult game

This award must go to Mare by PSS. You are required to manipulate no more than seven of your digits simultaneously. The animation of the characters is absolutely first class and the presentation cannot be faulted. All in all, a brilliant game which is impossible to play.

Loudest game

Defence Force — a Defender derivative by Tansoft — will literally deafen you, but who cares with such an addictive shoot-'em-up?!

Video nasty

There were quite a number of games suitable for this title. However, it must surely go to Killer Caverns by Virgin. This game, written totally in BASIC, has the worst graphics I've ever seen on a micro, non-existent sound and is totally unplayable. Need I say more?

S S.

Defence force: loudest game of the year

1984 Amstrad CPC464 games

The high standard of the first ever Amstrad awards bodes well for the future of home computing.

Now available in most high street stores, the Amstrad CPC464 has become well established, and the Software Awards for 1984 have been chosen from among the best programs to reach the shelves this year.

The inaugural year of the CPC464 has seen the introduction of all manner of programs from the frivolously flightly to the seriously sober.

With rare exception these have been thoroughbreds of their kind — thanks largely to Amstrad's software subsidiary Amsoft.

Value for money

Taking the top award was Matcal from Camel Micros

CRITIC'S CHOICE

With four useful toolkit programs on one cassette for less than a fiver, it wins the value for money award hand down and is an invaluable aid to the home programmer.

Other software houses would do well to research the marketing strategy of a product which retails so cheaply

Best graphics

Streets ahead of all its competitors, Star Avenger from Kuma Computers wins best graphics of 1984

But, sadly, it also takes the tut tut award for not having a joystick option. Control from the keyboard is nearly impossible in the faster challenging levels

Most humorous

Most humorous program of the year was Er*bert, from Microbyte Software, whose endearing characters Colly and Boris could surely melt the heart of the most ardent joystick joggler. A meer pair of nasties would be hard to find

Worst game

Undoubtably the worst program award goes to Solid Evaders from Solid Software. This bug ridden shoot-out had to be played on top of the instruction page — which needed to be shot away first.

Premier adventure

Interceptor Software pushed Jewels of Babylon under the portcullis of the old year to rescue the premier adventure award from under the noses of their nearest rivals Level 9.

Software house of 1984

Level 9 doesn't go away empty handed. Specialising in adventure games, Level 9 takes the software house award for continuing to strive for even better quality with each new release

Critic's choice

East-Amsword saves hours of work and innumerable type writer rubbers

D.H.

Level 9: software house of 1984

ATLANTIS [illegible] games. Each has a different scenario including Fun Arena all keyboard or joystick option. Can you discover the secret of Atlantis. Take a dive for £8.95

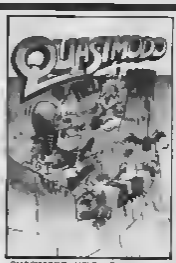

BENEATH THE STARS [illegible] Multi Space game. Skill levels. [illegible] review in Jan. issue of Games For Only £6.95.

SNOUT OF SPOUT [Ext. Space] On the planet Spout the inhabitants are all called Snout. Can you walk a Snout and save the planet Snout

INTRIGUE PENTHALON [illegible] Exciting [illegible] wild events for 2 players. Packed full of real time action and INTRIGUE ANIMATION. Everyone will learn to compete. Take your marks! Only £5.95.

QUASIMODO HELP. Ext. basic 20 scenes to glorious screen using keyboard or joystick. Very addictive musical and colourful gamesrider is waiting for you [illegible] £7.95 and off you go

ADVENTUREMANIA A [illegible] Computing [illegible] Top 10 of the 1984. Probably the most enjoyable graphic and text adventure available. 30 locations of Dungeons, Castles, Computers, etc. £5.95 will let you dabble for yourself

Telephone your order now

TI-99/4A

We have lots of exciting games. Send 50p + SAE now for a page of our 12 page catalogue. We now stock the Ams a Lantern range. All orders are sent FIRST CLASS SAME DAY. Games are post free inland. Overseas & Europe £1.00 extra per game.

COMING SOON! COMING SOON! COMING SOON!

SHUTTLE ATTAK. [Ext.] The most advanced Space flight-simulator ever for the TI 99/4A. The game everyone is waiting for.

PANIC. Hirez! Fully animated levels adventure. Another INTRIGUE challenge

INTRIGUE SOFTWARE

Cranbrook Road, Tenterden, Kent TN30 6UJ

QUICKSHOT 1 JOYSTICK TI 99/4A interfaced £13.70. Gives fantastic control in games like Atlantis. Spectrum C64 Version £9.25 (Price includes 75p P & P)

This singalong program for the TI-99/4A will play Happy Birthday whilst showing the cake and candles on screen.

You might choose to use it as a birthday surprise and ask those celebrating to blow out the electronic candles on screen.

After a few blows and when everyone is going blue in the face a press of any key will do the job for you.

Blow away

Celebrate our birthday with this sound and graphic program from 15 year old James Wright

BASIC utilities for the BBC

Shingo Sugiura reviews five ROMs and explains what they do and how well they do it. Read before you buy — this could be an invaluable guide

The BBC has an excellent dialect of BASIC. It is fast and has many structure commands not found on other BASICs. However, once you've been programming for a while, you realise that even BBC BASIC hasn't got everything the programmer needs.

This is where toolkit ROMs come in. There is a plethora of these utility ROMs for the Beeb, and they all sound tempting, in fact, quality varies greatly. The ROMs reviewed in this article are **Toolkit** by Beebugsoft, **Addcomm** by Vine Micros, **U-Tools** by Intersoft, **Toolstar** by Pace and **Caretaker** by Computer Concepts.

Search/Replace

Have you ever had to change a long variable name to a shorter one to save memory? You probably had to go through the whole program with the COPY and DELETE keys.

A facility to search and replace certain strings is an invaluable one and not surprisingly, all the toolkits had some sort of find facility. A good find/replace facility should be able to locate and replace keywords as well as strings and should also support wild card facilities. BASIC keywords could be located by all the ROMs.

In most cases the screen display was well thought out. On Toolstar and Toolkit, the line containing the string is listed and the actual string is highlighted. On Caretaker and Addcomm, the line is listed with multiple statements broken down to aid legibility. The problem with Caretaker's find (*EXCHANGE) facility is that in order to locate keywords, you must look up the token value for that particular keyword! When replacing strings, Toolkit and U-Tools didn't have the facility for selective replacement, only global. Also, keywords couldn't be replaced by Toolstar.

Verify

A surprising omission from BBC BASIC was that of verify. The ability to check the contents of memory with that on tape/disc is very comforting, especially to tape users. A verify facility was only implemented on Toolkit and Addcomm. On Toolkit, when verification failed, the memory address at which it failed was given so that it may be corrected with a memory editor (if you had one!), on Addcomm, the offending line was listed and the memory address of that line was also given.

Merge

Merging programs on the Beeb may be achieved by *SPOOL or *LOADing at TOP 2. However, all the toolkits had some sort of MERGEing facility which attempts to be better than the above solutions. On Toolkit, you must make sure that the line numbers of the original program and the appended program don't clash. When they do, you're informed but I felt that was rather pointless because the original line was overwritten anyway!

On the others however, the appended program could have clashing line numbers.

Variable list

When debugging a program, it is often very helpful to list the active variable names and their contents. Apart from Toolstar, all the ROMs had a variable lister. On Toolkit, you are given the option to dump the resident integer variables or only the active variables. In both cases, the names are listed together with their values in decimal and hexadecimal. On Addcomm, you can list variables but not their values! Rather disappointing. On U-Tools and Caretaker you can dump variables in a similar fashion to Toolkit.

Renumber

The command 'Renumber' is thoughtfully built into Beeb BASIC, the limitation is that you can only renumber the whole program and not parts, if for example you wanted to insert some extra code but keep the rest of the program intact. Only Toolkit, Caretaker and Toolstar had a selective renumber command. The Toolstar implementation was rather weak when compared with the other two.

Move lines

When developing a large program, it often becomes necessary to move a number of lines to another part, when you want to make a program more modular, for example. I was disappointed to find that only Toolkit had such a facility.

Program compactor

One of the most annoying features of the BBC is lack of memory. If you have a disc-based machine, in MODEs 0-2, you have less than 6K to play with! So programs must be as compact as possible.

In BASIC, this may be achieved by avoiding unnecessary spaces, REM statements and using plenty of multiple statement lines. All but Toolstar had some sort of facility to shorten a BASIC program. Toolkit allowed you to remove REM statements and/or unnecessary spaces. However, it didn't create multiple statement lines.

Addcomm has the most flexible compact facility of the lot. Not only does it remove unnecessary spaces and REM statements, it also creates as many multiple statement lines as possible and allows you to specify which part of the program you wish to compact. U-Tools and Caretaker allow you to remove unnecessary spaces, REM statements and create multiple statement lines. None of the compactors attempted to check whether a REM statement to be removed was referenced by a GOTO statement.

Expand

Once the program is compacted, it becomes impossibly difficult to read. A facility to split multiple statement lines and insert spaces would come in useful here and only Toolkit and Toolstar lacked such a facility. All the other ROMs had a lister which separated multiple statement lines. On Addcomm however, it was rather limiting in that you could only list one line at a time!

Repair bad program

Surely all BBC programmers must have come across the hideous message 'Bad program' at some time or another. All the ROMs supported some sort of repair facility. On Toolkit, Addcomm, U-Tools and Caretaker, the repair facility worked with varying degrees of success. The most flexible was Toolstar's. The command *FLIST allows you to list bad programs with all the corrupted bytes highlighted and the memory address at which those lines reside. Using this facility, the user may edit the program himself.

Function key lister

One of the most useful features of the Beeb is the function keys. One problem is, once you've programmed them, there's no easy way to reprogram them.

apart from retyping the definition Apart from Toolkit and Caretaker, the others allowed you to list the function key definitions and then edit them with the COPY key On Caretaker, there were commands to load and save function key definitions

Move program

If you have a disc-based machine, you may need to move your BASIC program down to &E00 All the ROMs had some sort of memory mover On Toolstar however, you had to specify the start and end address of the program as well as the destination address, then issue an OLD command On all the others, the BASIC program from the current value of PAGE to TOP was moved to the destination address and PAGE was set appropriately

Memory status

It is often helpful to know the value of certain memory locations For example the current value of PAGE, HIMEM, LOMEM, program length etc On all but Toolstar, there was a facility to display certain memory locations On Toolkit, free memory, program size, next location, PAGE, LOMEM, TOP and HIMEM are displayed Also, there is a facility to display information on such things as LISTO, WIDTH etc On Addcomm and Caretaker, the information given was rather limited On U Tools, a useful variety of information is displayed, but they weren't presented in a neat fashion like Toolkit

Manual

Toolkit comes with a 32-page A6 manual Despite it's small size, it contains all the necessary information and the individual commands are explained in detail There is also a section on technical information such as memory usage However, there is no index

Addcomm comes with a 72-page A5 ring bound manual with a bright green cover There is a brief introduction to it's general use and then a description of each command The descriptions are good and there is also an index

U-Tools comes with a 30-page A5 ring bound manual After a three-page introduction, each of the commands are explained in detail There is a full index and a complete list of errors together with their full meanings

Toolstar comes with a beautiful 136-page A5 ring bound manual It starts with an introduction followed by detailed fitting instructions and then an introduction to machine code! The rest of the manual is divided into sections covering machine code programming aids, toolkit commands, disc commands and the use of these commands within your own programs Each section is coloured so that you may find your way around the manual without even using the very comprehensive index How all manuals should be produced

Caretaker comes with a 30-page A5 ring bound manual After a brief introduction, each command is explained adequately There is a complete list of error messages, but an index would have been nice

Miscellaneous

A feature unique to Toolkit is it's program editor. This allows you to insert or overwrite parts of a line quickly and easily Although it is nowhere near as good as the full screen editors as used by MSX systems or IBM, it turned out to be extremely useful for correcting a small part of a long line. Toolkit also has a very useful memory dump facility

It must be mentioned that Addcomm supports many powerful graphics and Logo-type commands as well as the general toolkit commands Also a very useful facility of Addcomm is 'CHAR' which allows you to define a user defined character on a large grid There were some rather trivial commands such as POPFOR and POPGOS which allows you to jump out of FOR NEXT loops and GOSUBs, something a good programmer would never do in the first place

Perhaps most important of all, Addcomm doesn't use the conventional star command system Instead, the commands are used in a similar manner to BASIC keywords, i.e they don't have to be preceded by stars, can form part of a multiple statement line and can incorporate expressions

U-Tools has some interesting commands not implemented by any of the others For instance, there is a command to save a block of memory as LOCKed file, useful for protecting your machine code programs '*ROMS' lists the names of the ROMs in your machine, while a memory dump facility and full printer dump routine for the Epson range of printers were supported

Toolstar supports many machine code programming aids and disc commands as well as BASIC toolkit commands Some useful commands are '*RESTART' to clear memory and '*CONV' to convert decimal to hexadecimal and binary

Caretaker was the only ROM to have a facility for one-key entry (allows you to enter keywords with one key stroke as on the Elk) and a tab facility this would be most useful for the non-touch typists, the tabbing facility is useful for all assembly language programmers who like nicely formatted source code

Conclusion

Toolkit was one of the first toolkit ROMs on the market However, it still remains one of the best Admittedly, some of the expected commands are missing, but all the implemented commands are extremely user-friendly It's obvious that a lot of thought has gone into the design of each of the commands As such, it is highly recommended, especially to Beebug members who may obtain it at a very reasonable price

Addcomm is definitely the best value for money ROM on the market As well as lots of useful toolkit commands, it supports many powerful graphics commands I felt that some of the commands weren't as 'polished' as Toolkit or Caretaker but nevertheless, for those on a tight budget, this may be the right one

U-Tools offers a useful range of commands, but has some striking omissions

Toolstac is rather different in that it offers many machine code programming aids and disc related commands as well as toolkit commands It misses quite a few of the 'standard' toolkit commands and, as such, can't be recommended to BASIC programmers However, as a general utility ROM, it is only matched by Disc Doctor

Caretaker is a very professional product It's major disappointment was the cumbersome find and replace facility If this was updated, Caretaker would probably be the best toolkit ROM available As it stands, it's on a par with Toolkit and can also be recommended

	Toolkit £27	Addcomm £38	U-Tools £27	Toolstar £55	Caretaker £35
Number of commands	25	40	28	22	18

QL Bookware

This week, Colin Wilton-Davies looks at books of games listings for the QL. There's good and not so good in his selection

I can think of three main reasons for buying books of games listings for a particular computer. Firstly, to demonstrate the capabilities of the machine in one way or another, secondly, to pick up useful programming techniques for that computer, thirdly, and not least, to enjoy playing the games after you have keyed them in. With these thoughts in mind, I have been looking at two recent books.

A QL Compendium by Martin Gandolff and Robin Kinge, £7.95 from Addison-Wesley Publishing, was obviously written to satisfy all three of my criteria. The first two chapters are taken up by hints and tips on using the QL and some highlights of Super-BASIC. The time it took to read these was well spent, and I don't recomend skipping this section for instance, did you know there is a three-key combination which will crash the QL so thoroughly when pressed that only a RESET will restore it to action? The authors' recommendations on keying in programs and making backups are very sound.

After a useful short program to explore the peculiarities of the QL BEEP instruction, the book continues with an 'art' section which demonstrates many of the QL's graphic capabilities and allows the reader to draw pictures on the screen. The next section is on games of skill, and the one I chose to key in was a variation of Hangman with a guillotine instead of a scaffold. I have to confess to misspelling easy words just to watch the guillotine working! In the 'weapon' games section, I chose Depth Charge, which demands either a joystick or faster reactions than mine. I was confused at first because my ship only appeared after I moved it. I enjoyed the game, in spite of finding lines like

```
430 IF INKEY$ = "" THEN
    GO TO 430
```

when

```
430 PAUSE
```

would do the same job. I chose Noughts and Crosses from the 'traditional' section, liked the graphics, but was disappointed when I found I could win every time. I haven't tried either of the two-user games yet.

I gave the book two out of three for demonstrating, two out of three for educating, and three out of four for amusing — seven out of ten over all.

I kept **Tim Hartnell's QL Games Compendium**, £5.95 from Interface Publications, until last, as I was expecting a real treat from this author of so many good books for the ZX81 and Spectrum. The introduction told me I should be using the book for fun, and that increasing my programming skills and decision making ability was just a side-effect, so Tim Hartnell might disagree with the weighting of my three criteria. Tough.

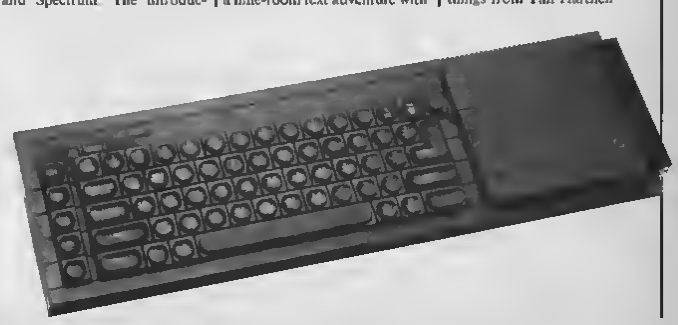

Tim's version of one of my favourite computer games is called Othello, and was a great disappointment. I lost a turn for attempting an illegal move, but won the game because the program's strategy was so poor that I could take all the pieces. The program can only tell if the game is over if all squares are covered — this is not the only way this game can end. There was also a really classic endless loop in the program print board, if end then print board, if end then print board, delete line 920 to remove this bug.

Next I tried Magician's Maze, a nine-room text adventure with no hazards which was bug-free but dull. Orbit purported to show a planet in orbit around a sun, but in fact this was a better demonstration of quantum leaps. For those misled by advertising hype, a quantum leap is characterised by a move from one orbit to another so abrupt that the object does not traverse the intervening space, it disappears from one orbit and appears in the other.

Finally, I tried Detective Q, which unaccountably reminds me of some board game, and which I really enjoyed.

The book ends with a number of ideas for computerising existing games, a good bibliography of computer games and a rather irrelevant glossary (who wants to meet COBOL in a games book — or anywhere else, for that matter?). By the way, if anyone can find an example of the use of the SELect On instruction in this book, I'll buy Tim a drink when I meet him.

Now to quantify. One out of three for demo, one out of three for education, two out of four for enjoyment, add up to four out of ten. Watch out for better things from Tim Hartnell.

Take the strain from your digits

A numeric keypad will make life easier for most BBC owners. HCW editor Dave Carlos checked the Softlife keypad out and gives you his verdict

Softlife Numeric Keypad BBC B £69.30

n the chip. This means that you can make the keys perform any function you need instead of the set functions. This is likely to be of great value to anyone wanting to customise a BBC machine and only have a small number of functions available. I can see

ses for this in schools hospitals instruments and industry. It provides a cheap and simple one-way system in a share line example and the BBC need not be on public view at all.

The only quibbles I have are that [illegible] to finding its own repeat keys and the system does like to be very much in priority system. Both of these unlikely to deter serious user from what is a good and well designed product it might even prevent keyboard failure due to over exposure to some games

100th ISSUE

Block moves

David Nowotnik shows you how to copy blocks of memory from one place to another. You can modify his instructions to run on any Z80 machine

One of the most powerful set of machine code commands available to the Z80 CPU are those which allow the programmer to copy a block of memory from one location to another. By using just one command, which is only two bytes long, it is possible to copy a block of several kilobytes of memory to another area of RAM.

In this article I'll show you how to use these commands. There will be some examples to try on the Spectrum computer, there is no reason why these examples could not be modified to run on another Z80 micro, provided appropriate changes are made to memory addresses.

The mnemonics of the Z80's four block move commands are LDI, LDIR, LDD and LDDR. All commands use the HL and DE register pairs to point to addresses in memory. In general, the value held in the byte whose address is contained in the HL register is copied to the byte whose address is in the DE register. The shorthand used for this is (HL) - (DE). This feature is common to all four commands, but each command does something slightly different having carried out this basic copy procedure.

LDI: After (HL) - (DE), the values in HL and DE are incremented (e.g. HL = HL + 1), and the value in BC is decremented (i.e. BC = BC-1).

LDD: After the byte copy, all the values in HL, DE, and BC are decremented.

LDIR: This is like LDI, except that the operation is repeated until BC holds the value of zero.

LDDR: Like LDD, but the operation is repeated until BC holds the value of zero.

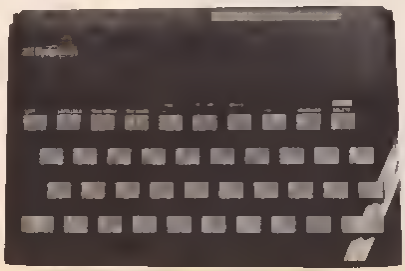

LDI and LDD will copy only one byte value at a time, whereas LDIR (LoaD Increment Repeat) and LDDR (LoaD Decrement Repeat) will move a large number of byte values. In all cases the register pair BC is used as a counter. For LDIR and LDDR, BC is used automatically as a counter, as the command will not stop until BC equals zero. In the case of LDI and LDD, you would use these commands in a loop, with appropriate commands to measure the value in BC, and loop back if not zero.

To use any of these commands, you would first load the desired values into HL, DE and BC, then use the appropriate block load command. For LDI and LDIR, the start addresses of the source and destination blocks are loaded into HL and DE, respectively.

For LDD and LDDR, the corresponding end addresses are placed in these registers. If the block move is straightforward, that is, simply copy a block of values from one location to another, then the Repeat instructions should be used. If the block move is more complex, e.g. if you want to move a block until a certain byte value is found, then you should opt for the single byte copy commands, with appropriate check routines.

If there is no overlap between the block of bytes being copied, and those to which the block is being moved, then there is no reason why either LDDR or LDIR should be used. However, if the source and destination blocks do overlap, then the correct choice of LDIR or LDDR is vital to ensure no errors in transfer. Figure 1 shows which command is appropriate, depending where the overlap exists.

	Mnemonics	Byte values	Comments
25000	LD HL,16384	33,0,64	Display file start
	LD DE,25200	17,112,98	Save file start
	LD BC,6912	1,0,27	No. of bytes to move
	LDIR	237,176	Move them and
	RET	201	return to BASIC
25012	LD HL,25200	33,112,98	Saved file start
	LD DE,16384	17,0,64	Display file start
	LD BC,6912	1,0,27	No. of bytes to move
	LDIR	237,176	Move them and
	RET	201	return to BASIC

You may have noticed that in most arcade games on the Spectrum you get instant changes of screen display — from the instructions to the first scene, for example. These use the Z80 machine code block moves. There is no reason why you shouldn't use this effect yourself, and the following example shows you how.

In Table 1 you'll find the assembly language listing and basic machine code loader of two block move routines. The first stores the display and attribute files in an area of RAM, while the second reverses the operation.

Type in the BASIC loader and SAVE it. After RUNning the program, list the program, then call the first machine code routine with the direct command — RANDOMIZE USR 25000. Clear the screen with CLS, then copy the saved block back to the screen with the command — RANDOMIZE USR 25012. The listing (the saved display) should be instantly returned to the screen. You can save and return any display you want by this method.

The routine is designed to run on both 16 and 48K Spectrums. You'll find there isn't much space for a BASIC program if you want to expand my loader routine. If you have a 48K Spectrum, you can move the machine code routine and the storage area up in RAM, with appropriate changes to the CLEAR command, the USR and storage area start addresses.

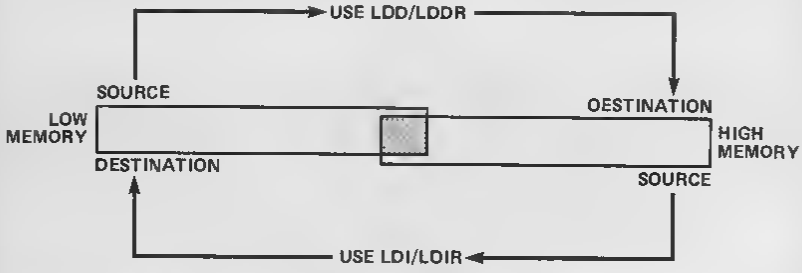

Figure 1. Choice of block load command with overlapping blocks.

Parco on the Road

We hope to be getting out and about in 1985 so that you can see for yourself the wide range of stock that we carry.

See you at Bedford
on March 3rd 1985
from 10 a.m. to 5 p.m.

The Bunyan Centre
Mile Road
Bedford
Bedfordshire

Admission 50p

We look forward
to seeing you there!

Jack and Ben

Sample these new arcade games featuring Jet-Power Jack and Big Ben

Jet-Power Jack
C64
£7.95

Micro Power, Sheepscar Hse, 15 Sheepscar St South, Leeds LS7 1AD

There are plenty of games around where you have to jump your character from one platform to another across the screen. What is different about this one is that Jack can not only jump, but also fly with the help of his turbopak.

This means the platforms can be much further apart than is usually the case, and at the higher levels some very tricky manoeuvring is needed to get from one to the next.

There are five levels, and at each level you have to guide Jack from one side of the space garage in which he has been imprisoned to the other and back again five times to collect fuel pods for his starship. You can choose to start at any level, a nice feature, but it is advisable to master the early levels before attempting the later ones.

The graphics and sound are up to the high standard I have come to expect of Commodore games, though not to any way exceptional. The game though not conspicuously original, is a very good one of it's type, and great fun to play.

★ ★ ★ ★

Smuggler
C64
£7.95

Superior, Dept C, Ground Floor, Regent Hse, Skinner La, Leeds

From the illustration on the packaging I assumed I was going to have fun sneaking barrels from ship to shore under the ever watchful eyes of the coastguard. Well, I was mistaken: this is just another variant on the theme of moving platforms, vanishing steps and adversaries.

You must catch the barrels as they fall from the ship, negotiate the obstacles, get to the top of the screen and throw the barrels back on to the ship. The number of barrels you must put back varies from screen to screen, and is displayed at the top of the picture.

To add to the silliness your adversaries are kangaroos and penguins. I'm still trying to work this out, there must be some significance but it's got me beaten.

There's a demo-screen which will run through all the available screens and the author has included the usual music while you play.

If this is your type of game you may wish to buy it, however, as far as I can see, nothing unusual.

M.W.

value for money	60%

★ ★ ★

Big Ben
C64
£7.00

Interceptor, Lindon Hse, The Green, Tadley, Hants

Giz has been trapped by Jem the evil wizard and has to collect thirty gold coins to open the tunnel leading to Big Ben's bell so he can ring the bell and free himself. He can travel around to collect the coins on foot or in a turbo plane. The plane is faster, but he has to get out of the plane to pick the coins up and the landing pads aren't easy to identify.

This is a variant on the platform type of game. There are platforms, moving staircases, chains to climb and other assorted obstacles. There are also detonators dotted around, and standing on one of these causes Giz to jump upwards, so if you want to stay on a particular level you have to jump over the detonators, a reversal of the usual situation where you jump to change levels.

Collecting the first few coins is comparatively easy, but it gets harder. Collecting all 30 will take a lot of practise. It's an attractive and entertaining game and, though not startlingly original, it's worth looking twice at.

★ ★ ★ ★

Henry's House
C64
£8.95

English Software, Box 43, Manchester M60 3AD

This arcade game loaded easily and quickly and then went through a demonstration mode. These screens have been photographed and reproduced on the cassette inlay so you get an idea of what to expect.

The aim is to guide young Prince Henry around his royal household exploring and investigating every corner. It is a ladders and levels game, but not straightforward. Each screen is different, set in another room, and for each new room a new strategy must be discovered.

The instructions do not explain any of the strategies, but give hints as to which article in the room is important as far as gaining access to the next room is involved.

Overall this is a good game with increasingly difficult levels. The graphics are well done and the music passable.

Using the birth of Price Hal to sell a computer program is questionable but the game has sufficient originality to make it a best seller. I have just one query. Why is Prince Henry wearing an Arthur Scargill hat?

★ ★ ★ ★

Mutant Monty
Amstrad CPC464
£8.95

Amsoft, 169 Kings Rd, Brentwood, Essex

Stunning graphics and a multitudinous array of screens provide a colourful display throughout the entire duration of this amazingly clever game.

Guiding Monty by using either the keyboard or a joystick through a complex variety of fast moving hazards is a challenge indeed.

I found it difficult to stop playing the game long enough to write this review, which serves to emphasise just how compulsive it can become.

Lightening fast reactions are essential in trying to avoid awful nasties like the Parallelians and the rarer Quantum Leapies.

Having secured all the gold Monty then has to rescue a maiden in distress. Although desperate to see just what the distress looks like (!), and not having reached that part of the game yet, I can't comment on it.

There is no reason to believe the graphics will be any less appealing than all the other pages shown on the demonstration sequence.

Played against the clock for bonus points your five lives are at risk. Trying to beat the clock leads to inevitable errors that a more cautious approach might well have avoided. Alternatively caution takes time!

★ ★ ★ ★ ★

I'll puff and I'll puff...

Are you a wind-bag? If so, you should have no trouble with Andrew Bird's fun game for the Spectrum. You must be full of hot air to succeed

Here are two programs to get you into the party spirit.

Program one draws a birthday cake with flickering candles and asks you to press any key and blow. Once you've done this the candles go out and more are drawn in the shape of 100, accompanied by the song Happy Birthday to You.

Program two is an observation game to test your speed at counting. You're shown a brief glimpse of a pile of presents, and a cake with candles on it.

Then you're asked how many presents Sue or Pete had and how old they are, judging by the number of candles.

Program one
How it works

5-6 graphics
8-15 set up arrays
20-50 draw cake and candles
60-80 animate candle flame
90-110 flame goes out
500-530 candle display
1000-1100 happy birthday tune and message

Program two
Variables

Dim c, Dim a co-ordinates for candles
w selects candle to have flame flicker

Basically improving

HiSoft Pascal 4T Amstrad CPC464 £34.95

Amsoft, 169 Kings Rd, Brentwood, Essex

This implementation of Pascal is supplied on cassette and is accompanied by a handbook.

The book is primarily an insight into the features particular to this version of the language. Like most other computer languages there are numerous dialects and the handbook does not set out to teach you the language.

Separately available is the Tutorial Guide to HiSoft Pascal, devoted to teaching this version of Pascal.

Loaded by pressing ctrl/enter, the cassette writes the Pascal as a resident foreground RAM program.

From here on all access to the computer is through the new language, until a reset is invoked or the computer is switched off, when BASIC is reinstated.

After being compiled and translated (both options at the press of a key), your complete program can be saved to cassette in machine code.

More excitingly, after returning to the BASIC start-up screen, the machine code program can be loaded with ctrl/enter. Your program is then RUN with all the speed and security of a professional program!

The Pascal language is decidedly more difficult to master than BASIC, especially for newcomers to computing. Nevertheless, experienced computer linguists will find Pascal an exciting and worthwhile addition, ideally suited to a wide range of applications.

Routines are defined as Functions and Procedures that are either user defined or pre-defined within the language, like READ and WRITE, the main Input and Output Procedures.

Herein lies the major strength of Pascal. Think of it as a vast extension to the BASIC command DEF, and the powerful composition of a Pascal program becomes apparent.

The program is built in blocks, each one able to access others which again can call further blocks. The main control program designates the sequence in which the other Functions and Procedures have to be accessed.

It follows therefore that programs have to be designed from the top down. With the main control part being written first, all the Functions and Procedures can be written later. This makes for comparatively simple program design.

Accompanying the Pascal language program is a HiSoft Turtle Graphics program on the same cassette.

The Turtle is loaded using ctr/enter whilst the Pascal program is resident. A short and ludicrously inadequate demonstration program is included. Removal of this demo releases space for the example listings to be typed into RAM. There is nothing to enthuse about here either.

With only a few command words to understand and a clear explanation of each in the handbook, writing worthwhile programs is the next step after mastering Pascal.

Incidentally a listing of the resident Turtle Procedures can be sent to either a the Monitor or to a Printer, where all will be revealed. An analysis of the numerous user calls is contained in The Complete Firmware Manual (Soft 158).

Experienced programmers looking for another language will find plenty of power in this pricey package. **D.H.**

One for the Amstrad, to improve the capabilities of you and your micro

It's a first!

To mark our 100th birthday, we're pleased to present our first ever MSX program. It's a sound editor by Colin Wilton-Davis, and there's full explanations, too

When I began playing with my new Sanyo MSX computer (MPC-100) one of the first things to impress me was the quality of sound which could be generated.

There are three MSX BASIC statements for generating sounds BEEP, PLAY and SOUND. The first two are comparatively easy to use but the SOUND statement is rather complex, so much so that the author of the Sanyo MSX-BASIC programming manual has made some mistakes in the section dealing with it.

If you key in the following program you will find it much easier to experiment with SOUND statements. When you have generated a sound you like make a note of the values displayed on the screen for a later [illegible]

How it works

The sounds in MSX machines are generated by the AY-3 8912 PSG chip (PSG stands for Programmable Sound Generator). These sounds are controlled by entering numbers into the 14 registers of this chip, which are numbered from 0 to 13.

Lines **40** to **70** initialise the program by setting up two arrays one of these holds the contents of the 14 registers, the other holds the maximum values for each register which affect the performance of the PSG.

Lines **80** to **130** display the current states of the registers and their functions on the screen.

Lines **140** to **210** are data statements specifying the maximum values to be entered into each register.

Line **230** generates the resulting sound.

Lines **260** to **360** accept keyboard input to allow you to repeat the sound or change the contents of any register and thus alter the sound.

Lines **370** to **500** are one line subroutines to give a brief description of each register's function.

Variables

The array SM holds the maximum values which may be input to each register. You won't have to worry about these in your own programs you can make SOUND statements putting 255 into each register without crashing the program, but numbers above the maxima merely repeat the effects of numbers below them.

The array SR holds the current values of the 14 PSG registers.

When you run the program, these start at all zeroes, and surprise, surprise no sounds come out. You must start the ball rolling!

The variable C is just used as a pointer to the register that is currently being changed.

Using the program

The sounds produced by the MSX machines come out of your TV set, so don't forget to turn the volume up above zero (but not too far!) before you wonder why nothing is happening. Before you start the program (or any other new program) by keying RUN, you should save it on cassette by keying CSAVE "edson", switching the recorder to 'Record' and pressing the ENTER key on the MSX.

Now key RUN and press the ENTER key, on the Sanyo MPC 100 you can just press the F5 key to do this. The screen should display a table of information about the PSG register contents, but you won't hear anything until you alter some of the registers.

I'll leave register 7 until next to last, otherwise we can look at them in numerical order. The first three pairs (0 to 5) control frequencies on the three channels A, B and C — yes you can produce three note chords if you like. The second of each pair gives coarse control of frequency, the first gives fine control. Low numbers in these registers give high notes, and vice versa.

Register 6 does the same thing for the white noise generator. Registers 8 to 10 control volumes on the three output channels: high numbers give high volumes, with a number of 16 giving control of volume to the envelope registers. Registers 11 and 12 are fine and coarse controls for the timing of one envelope cycle' with high numbers giving long times (slow). Register 13 selects the shape of the envelope', which is just the way the volume varies with time — see the diagram.

Register 7 is a switching register which controls all your outputs, perhaps strangely, when a bit is set (1), it switches OFF and vice versa. In this program the initial state is zero, so everything is ON. The Least Significant Bit (bit 0) controls tone output to channel A, so to switch OFF the tone output on channel A, add 1 to the contents of this register.

I'll leave register 7 until next to last, otherwise we can look at them in numerical order. The first three pairs (0 to 5) control frequencies on the three channels

```
420 PRINT TAB(15 1"Chan C Freq (coarse)  RETURN
430 PRINT TAB(15)("Noise F eq  RETURN
440 PRINT TAB(13)("Select Noise/tone Chan" RETURN
450 PRINT TAB(15)("Chan A Vol" RETURN
460 PRINT TAB(15)("Chan B Vol  RETURN
470 PRINT TAB(15)("Chan C Vol" RETURN
480 PRINT TAB(15)"Env Period (fine)"RETURN
490 PRINT TAB(15)("Env Period (coarse)  RETURN
500 PRINT TAB(15) "Env Shape" RETURN
```

up a library of these simple sound combinations incorporate some of them in a program which changes patch for even more MSX sounds

A, B and C — yes, you can produce three note chords if you like. The second of each pair gives coarse control of frequency, the first gives fine control. Low numbers in these registers give high notes, and vice versa.

Register 6 does the same thing on the three output channels: high numbers give high volumes with a number of 16 giving control of volume to the envelope registers. Registers 11 and 12 are fine and coarse controls for the timing of one envelope cycle: with high numbers giving long times (slow). Register 13 selects the shape of the 'envelope', which is just the way the volume varies with time — see the diagram.

Register 7 is a switching register which controls all your outputs, perhaps strangely when a bit is set (1), it switches OFF and vice versa. In this program the initial state is zero, so everything is ON. The Least Significant Bit (Bit 0) controls tone output to channel A, so to switch OFF the tone output on channel A, add 1 to the content of this register.

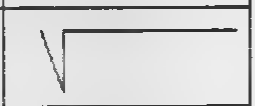

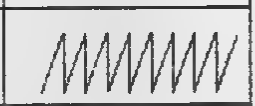

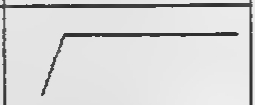

Next up, Bit 1 controls tone out on channel B and Bit 2 controls tone out on channel C. Bits 3 to 5 control white noise out on channels A, B and C. You can do interesting things in your programs by setting up different sounds on each channel, then switching them on and off independently with this register 7. Adding 16 to the register contents switches off white noise on channel B ((if it was on!). To switch off white noise altogether set register 7 to 56.

Now let's make some noises. Chane R8 (short for register 8) to 4 and R1 to 4. Result is a buzzing. Now change R7 to 56, switching off the white noise and a tone takes it's place. Change R7 to 63 and silence back to 56 and the tone reappears. Now change R3 to 2 and R9 to 8, this superimposes a louder, higher tone on your existing lower tone. You must be getting the hang of this now, so play around. Just a few interesting combinations to start you off (namenthoned registers to zero).

R1 = 1 R7 = 56, R8 = 16, R12 = 1 and R13 = 14. Now play with R12 and 13 to familiarise yourself with the different envelopes. R6 = 31, R7 = 55 R8 = 16, R12 = 4 and R13 = 8 gives a steam train in a hurry, now change R7 to 53, R9 to 12 and R2 to 200 to make the whistle blow. Varying R7 between 55 and 53 switches the whistle on and off without stopping the engine noise. Varying R12 will make the train change speed. I'm sure your imagination will take you on from here. Once you have built

Throw your voice

The Metron Audio speech synthesiser has proved remarkably easy to use. HCW editor Dave Carlos tells you what it does and what he thinks of it

Speech Synthesiser 32K BBC £37

7 Delilah Rd, Hamworthy, Poole Dorset BH15 4NR

The synthesis of speech is a fascinating area for the home computer user to explore. The BBC machine was always designed to have the possibility of speech output and therefore provision was made on the main board for the chips which are required. Acorn's own speech system has by far the best quality of speech that I have heard. The problem is that this system has only a limited number of words and to get any more you have to resort to machine code.

This system doesn't suffer from any of these problems and like the Currah unit, which it resembles outwardly, it uses allophones to create speech. These allophones are the actual sounds we use to make up our words and there is a separate allophone for each of these speech components, so there is one for the 'a' in 'hay' and another for the 'a' in 'act'. By combining these you should be able to make the machine say anything you want.

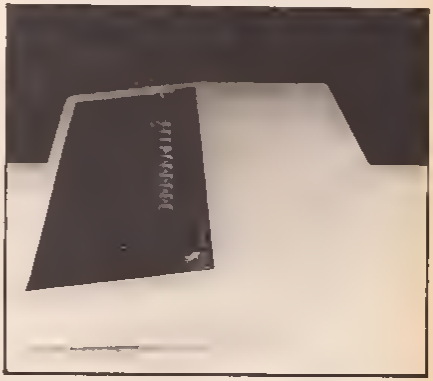

What is different about this product is its simplicity of use. There are just two components to be fitted to the BBC itself: a chip in the sideways ROM socket and the synthesiser circuit on the BBC's main board. The manual contains very simple instructions which make fitting a two-minute task. In the ROM there are the driver routines which make it so simple to use. Typing *SAY -0 and the speech flows on. One item that isn't in the manual is how to make it shut up if the program is stopped by pressing ESCAPE. You type *SAY -0 again and that does the trick.

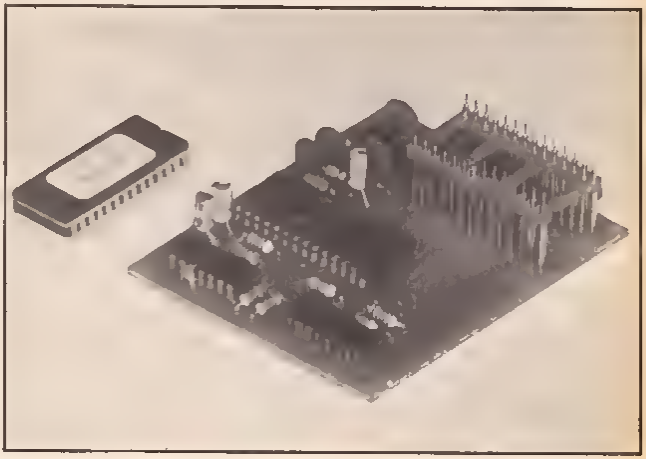

The rest of the space in the 8K ROM is used to give the synthesiser a large whole word vocabulary. This means that it can say more words than the Acorn but still retains the flexibility of the Currah unit. There are about 700 words in the ROM and most are very clear and easy to understand. Each word can also be given a pitch setting and this means that you can have a high voice or a lower one. We found that setting 2 was the clearest but the others were quite acceptable too.

Overall this unit is well designed, simple and easy to use. The eight page manual is good but could have been better designed.

I found myself searching all over for the information I needed. It is a little overpriced when compared with the Currah unit but much simpler and easier to use so this might be justified.

D.C.

Track the bi tre

Turn the office upside down to find the mislaid birthday presents. The star of this game by Jon Revis is Dauntless Dave — and he's not got long to locate these missing gifts!

Today is HCW's birthday, and the Editor, bless his cotton socks, has purchased some extremely expensive presents for all the office staff. Unfortunately, due to a fit of absentmindedness, he's lost them all. Fearing industrial action from the HCW girls he decides to call in the one man in the universe who could possibly save the day — Dauntless Dave.

As the game begins you are shown a floor plan of the HCW offices. Somewhere in these offices lie the presents. Using his amazing powers of ESP, Dave pinpoints one of the presents and the office in which it is hidden begins to flash.

Moving swiftly to the office Dave, complete with scissors and sellotape, takes a look in each of the four corners, and then the present miraculously appears.

The game is a race against time, and bonuses can be obtained should you find a present soon after the room begins to flash. Time bonuses are indicated by a loud whistle.

When Dave's time is up the screen clears and the number of presents collected is displayed. Dave is guided around the screen using the following keys: Z left, X right, : up and / down.

Variables

I% multi purpose counter
M% multi purpose counter
N% multi purpose counter
FLAG% indicates whether a key has been pressed
G used with GET to check for space bar
NOW used in conjunction with TIME to determine length of time taken to collect a present, for awarding a bonus
base% used with the offset value (sq%) to indicate the number of items of DATA to be READ
count% number of corners visited by Dave
char% counter used when constructing a character
corner X%, corner Y% variables into which the corner co-ordinates of the present square are READ
col% colour in which square is to be filled
manX%,manY% current co ordinates of man
man% used in FNcheck_pos to find grid intersections
oldmanX%,oldmanY% old co ordinates of man, used for wiping the old image
present% number of presents collected
square% flag which indicates whether a flashing square is present upon the grid
a$ temporary string
bow$ holds the character for the bow
man$ holds the character Dave
C%(4) array used to signal whether a corner has been visited by Dave
SQ(16) array used to indicate whether an office has been changed into a present. When holding a value of 1 the square is a present
cornerX%(4),cornerY%(4) hold the co-ordinates of the square currently being checked for

Procedures and functions

330 DEF PROCcharacters repeatedly calls PROCdefine_character(Z%) specifying the number of items of DATA to be READ. Finally it assigns the characters created to their correct variable names.

400 DEF PROCdefine_character(Z%) creates the multi-coloured user defined characters using a string concatenation technique.

530 DEF PROCchars contains all the VDU23 character definitions.

730 DEF PROCgrid draws the grid representing the HCW offices.

880 DEF PRDCread_keyboard is the engine room of the whole program. The keyboard is scanned for any key depressions. FNcheck_pos is then called to check whether Dave is standing on a horizontal line, vertical line, or an intersection.

Finally, depending upon the results of FNcheck_pos, the character's co-ordinates are incremented in the correct direction. Another important feature of the PROC is the variable FLAG%, if no key has been pressed the value of FLAG% will be zero, so the program will not bother printing the character again as he has not been asked to move.

1020 DEF PROCprint_man when using exclusive OR printing as we are doing in this case, one can erase the old image of a character by printing the same character on top of itself. This is much less destructive than using the old wipe string technique, where the old image of the character is erased using a square character of the same colour as the background.

To use this technique for Dauntless Dave it would be necessary to re-draw the grid each time the character Dave was moved. This is because the wipe character would erase both Dave and the lines of the grid over which he was moving.

Dave is reprinted at the co-ordinates manX%,manY%. These values are then passed to oldmanX% and oldmanY% for use the next time around.

1100 DEF PROCinit here we dimension all the arrays to be used, and also set all the variables to their initial values.

1270 DEF FNcheck_pos(man%) is the part which ensures that Dave walks around the walls only and doesn't go tearing across the middle of an office. To make the calculations easier, the grid around which he moves is drawn along co-

down
rthday
ats

100th ISSUE

ordinates of whole hundreds, e g the vertical lines are drawn at 100,300,500,700,900 respectively

Dave is therefore only allowed to move vertically if his manY% co-ordinate corresponds to one of these numbers FNcheck_pos ensures that Dave is stood at a co-ordinate which is a whole hundred, and also that it is an odd whole hundred before allowing him to travel vertically

The odd whole hundred part is important, otherwise he could walk up the middle of an office as they are 200 screen co-ordinates wide

FNcheck_pos also does this for the horizontal co-ordinates — what a busy little FN it is Should all the conditions be fulfilled, the FN returns a value of TRUE and Dave's co-ordinates are incremented in the correct direction

1310 DEF PROCselect_square chooses a random number between 1 and 16 and checks whether that particular square has been used before This is done by examining the array SQ(N%) If an element contains a zero, then that particular square has not been used before Having chosen a blank square, the number of this square is passed to the PROCsquare_coords

1400 DEF PROCsquare_co-ords using the value passed from PROCselect_square, we RESTORE to the line of the program which contains the DATA statement holding the corner co-ordinates of the selected square These co-ordinates are held in the arrays corner X% and corner Y%, only holding the co-ordinates for the office that is flashing two four-element arrays are sufficient Should we decide that the co-ordinates would all be READ into one large array at the beginning of the program, we would need two 64-element arrays. This represents one huge chunk of memory and may cause the familiar NO ROOM message to appear as the program becomes larger

Finally we call PROCfill_square, passing the colour with which it is to be filled at the same time

1510 DEF PROCfill_square (col%) the main task of this procedure is to fill the square selected in the correct foreground colour The colour variable col% performs two tasks in this procedure it's main one is determining the colour of the square, but it also indicates to the PROC whether the square has been changed into a present or not

If it is called with a col% value of 8 then it is a flashing black and white room, if it is called with a col% value of anything else, then the square is filled with cyan and a bow is printed in the middle

The flag variable square% is reset to zero at this point, allowing PROCselect_square to be called from the main loop, and setting up another flashing black and white office

1640 DEF PROCcheck_corner compares manX% and manY% against each of the corner co ordinates of the flashing square Should Dave's co-ordinates be identical to any of the four corners, then this is registered by placing a value of 1 into the corresponding element of the array C%

Finally the variable count% is incremented by one When this variable reaches four, each of the four corners will have been visited and we can call PROCfill_square with a value other than eight

The TIME at which count% reaches a value of four is used in conjunction with the value of TIME when the square was first selected in PROCselect_square (NOW), to ascertain whether or not you checked all four corners of the flashing square fast enough to be awarded a time bonus Having drawn the present with PROCfill_square we can now increase our tally of presents by one.

1370 DEF PROCbackground draws a pretty border of Daves around the screen at both the beginning and the end of the program

1870 DEF PROCend having used PROCbackground, we insert the appropriate text and your score

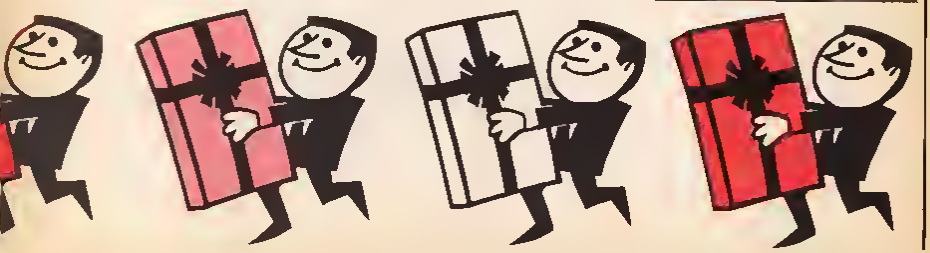

2040 DEF PROCtitle similar to PROCend, but this time we display the program title and a brief explanation of the game.

I tried to speed up the execution of the program by replacing many of the variables by resident integer variables However, the increase in speed was so minimal that I decided that the more informative long variable names should stay

The most time consuming part of the program is probably the drawing of Dave, as he is a 2 x 2 character consisting of 12 superimposed characters, and requires the manipulation of 47 items of DATA each time he is drawn on screen

I doubt whether the programmers at Acornsoft will be quaking in their boots when they see Dauntless Dave, but I hope the techniques employed may be of some use to you in your future programming ventures

Mix and match

Here's an assortment for you to browse through. The experts have assessed them all

The Jewel of Power 48K Spectrum £7.50

[illegible] 215 Beacon Rd [illegible] Kent

I slogged my way through the [illegible] have collected lamp, matches, [illegible] flask note, key fragment [illegible] and had the game quest [illegible] plained in the cellar opened [illegible] door, walked through [illegible] deserted village to the [illegible] Crossroad and [illegible] nothing.

I couldn't go NE to the Woodland Barrier. I tried NW and ended up in the maze dead. I then reLOADed to restart this BASIC adventure to recover the [illegible] jewel and the fragment [illegible] magic wand. You [illegible] castles, forests and [illegible] 120 locations [illegible] answer puzzles and problems [illegible] 1,000 words.

[illegible] are fourteen A4 pages of instructions that are the fullest and easiest to understand that I have ever seen. A simple tutorial explains communication and Play Test explains moves to follow to complete the task. Each of the eight areas is described in full with clues to answer problems set, and in map form.

The colourful scenes are well drawn, movement and acceptance of instructions is speedy and the adventure is quite addictive. **T.W.**

playability	70%
graphics	65%
value for money	80%

★ ★ ★

Jester TI-99/4A £7.95

Harlequin, 211 Shakespeare St, North Kelvinside, Glasgow G20 [illegible]

I had great difficulty in loading this program due to the inordinate amount of tape flutter. I hope this defect is confined to the review copy.

The object is to escape from the castle of the evil Prince Mirvar. You, Jester, must guide yourself from left to right across [illegible] screen, avoiding numerous hazards. These include rocks thrown by the prince, arrows fired by the guards, and the guards themselves. There are gaps in the battlements to be crossed by hitching a lift on a balloon.

Your score [illegible] shown on screen [illegible] the [illegible] is added [illegible] the screen [illegible]

[illegible] adequate [illegible] and [illegible]

This is probably [illegible] the younger player [illegible] sophistication which older players demand.

This needs Extended BASIC and joysticks. **P.B.**

value for money	60%

★ ★ ★

Komikaze TI-99/4A £6

Stainless, 10 Alstone Rd, Stockport, Cheshire

Watch out — the aliens are on the attack again, and these are the worst kind — kamikaze aliens. They descend from the skies in UFOs to crash into your city unless you have the skill and reflexes to stop them.

The screen shows a profile of your city, plus the current score, high score and status. The aliens come down from the top in either formation and speed which depends on which screen you're playing and the skill level employed. Using your joystick you must position the sights of your laser on the alien craft. A quick flick of the fire button and he will be blasted from the air, but if you miss he will crash in your city. The game ends when ten of the aliens have penetrated your defences.

Invaders from outer space — hardly the most original theme, but if you still have the appetite for this then you'll find it [illegible]. Personally speaking, I'm [illegible] of zapping and zapping [illegible] mindless manner. Surely it [illegible] something more peaceful [illegible] to do? This needs Extended BASIC and a joystick. **J.W.**

graphics	70%
value for money	80%

★ ★ ★ ★

Dungeons of Ba C64 £12.95

Quicksilva, Palmerston Park Hse, 13 Palmerston Rd, Southampton SO1 1LL

It's described as a real time interactive film — a grand name for a graphic adventure game. You guide Norman the warrior through subterranean caverns to find the Ba stone.

The use of a disc allows much more data to be provided than is possible with a cassette game, but the drawback is the lengthy [illegible] while the notoriously slow [illegible] chunters away. Every time you die the first stage of the game has to be reloaded.

You wander along passages and through rooms, probing [illegible] discover secret rooms and trying to avoid the guards, spider-like monsters and other hazards. Movement is controlled [illegible] joystick, but you can use the function keys to select [illegible] different modes: shield mode — where arrows don't inflict harm; arrow mode — to dispatch [illegible] ornaments; fight mode and [illegible] mode — for picking up objects.

It's quite challenging [illegible] should take a while to complete, but doesn't live up to [illegible] extravagant claims on the packaging. This game needs a disc drive. **M.N.**

★ ★ ★ ★

Titan BBC B £10

TDS, Richmond House, 1b [illegible] Rd, Cotham, Bristol BS6 [illegible]SH

Titan is a utility mainly for the machine code programmer and offers full monitor and debugging facilities.

The utility works by setting up 'windows' which correspond to addresses in memory and displaying the contents of the registers at each point. There is a variety of commands enabling the user to alter the [illegible] Pointer to the various windows, [illegible] and alter memory blocks and to alter or read individual locations.

There are arithmetic routines to calculate combinations of [illegible] values and a complete hexadecimal and ASCII dump facility. Most of the facilities are standard but several have interesting functions. The [illegible] code relocation routine [illegible] code to run at the new address and a single stepping [illegible] mode is provided which is invaluable. Also in the [illegible] a complete intelligent disassembler which can distinguish between data and code.

[illegible] has bad points but [illegible] offers a range of useful functions. Anyone needing [illegible] of this kind will [illegible] unlikely to do better. **D.A.**

100th ISSUE

Mad dogs

Mad dogs are among the rabid animals on the rampage in France. Can you survive the journey to Paris in Nicholas Rust's original game?

This game is based on a novel idea. You find yourself in Toulouse, in the south of France, and you must journey north to reach Paris. You have one very big problem: many of the animals that you meet in the countryside are infected with the killer disease, rabies.

You have no way of knowing which animals are dangerous so you must decide when you can take risks. At the start of the game you have two vaccines which last for only one encounter with an animal as they are really only to be used in dire emergencies.

To reach Paris you must travel 20 roads north, so if you have to travel south this will make the trip longer and more risky.

When you meet an animal you have three options. You can run — but most of the animals are faster than you. You can vaccinate yourself — but this only lasts for one encounter. You can kill the animal by shooting it — if you miss you will have to make yourself scarce pretty quick!

How it works

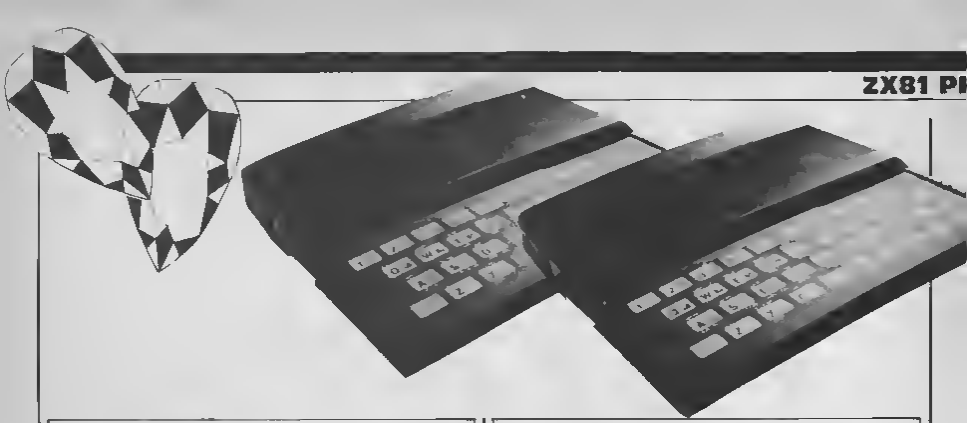

10-200 set up arrays
210-340 set up screen display
1000-1030 routine for north road selection
1200-1230 routine for south road selection
1400-1440 routine for farmyard selection
1600-1650 routine for meadow selection
1800-1850 routine for wood selection
2000-2050 routine for river bank selection
2500-2540 routine for finding bonus equipment
2600-2630 routine for use of vaccine
2700-2730 routine for firing shot
3000-3070 routine for player running
3300-3340 routine to tell player when no vaccine or bullets
4000-4090 routine to show position
5000-5045 routine for player becoming rabid
6000-6030 routine for reaching Paris
7000-7120 routine for instructions on meeting animal
8000-8060 play again?
9100-9150 ask player's name
9200-9250 variables

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a predistinguished Pools prediction aid. It comes complete with the largest numbers available - 20000 matches over 18 years. The numbers updates automatically as results come in
- **PREDICTS** the just SCORED DRAWS, but AWAYS HOMES and NO SCORES.
- **SUCCESSFUL** RELEC magazine find Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - chooses as many selections as you want for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All English and Scottish team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below)

Screen shots from Spectrum version

- **BBC/MICRODRIVE COMPATIBLE** All versions (except Apple and IBM) are supplied on tape with simple instructions for conversion to disc/microdrive operation.

(This means results are supplied with the package so that predictions can start immediately.)

AVAILABLE FOR Spectrum (48K) Commodore 64 VIC 20 (+16K) AMSTRAD CPC 464 BBC B, Atari (48K), ZX81 (16K) Dragon, Apple II, IBM pc

PRICE £15.00 (all inclusive)

NEW

FIXGEN 84/5

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1984/5. Simply type in the date and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £18.00 (all inclusive)

Fixgen alone £5.50

COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

Coursewinner is complete to allow you to develop and test your own unique winning system. Using information from daily newspapers or Sporting Life the most important factors can be input and analysed. The program is supplied with a database detailing hundreds of trainers and jockeys, and effect of the draw for all fixture courses. (Flat & National Hunt.)

AVAILABLE FOR Spectrum (48K), Commodore 64 (BBC B), Future Atari (48K), Apple II

PRICE £12.50 (all inclusive)

BBC bonanza

Five games for your beeb, read our reviews before you buy

Apple Pie
BBC B
£6.95

CSM, Suite 49 Strand House, Great West Road Brentford, Middx TW8 9EX

The setting for this colourful Mode 2 arcade game by Visions is a small mid western American town, in reality a grid of coloured squares through which a variety of aliens swarm, attempting the rather improbable task of stealing the stars from the town's flag.

Your job is to control a blue Birth tank driving round the grid shooting the aliens before your supply of stars runs out. The flag itself is at the bottom, and each alien touching it removes one star. Remaining stars at the end of each wave give bonuses and there is an additional bonus for shooting the five lettered droids in the correct sequence. Other nasties include Homers which follow you round, Scythes and Packers. Tanks which shoot back and Ziggies which can only be shot broadside on.

Control of the tank is keyboard only but the controls are fairly smooth and responsive. The graphics are faultless and fast but the tank's manoeuvrability is limited and a reverse button would be useful. Nevertheless, Apple Pie is a faithful original and playable game and I recommend it unreservedly.

★ ★ ★ ★

Espionage
BBC
£8.95

Modular Resources Centre 12 Ledger La, Lofthouse, Wakefield WF3 3NG

Now I have to admit that this program is different! Written entirely in BASIC the aim is to find the spy that has moled his way into the management of MR Ltd.

You enter the company as a detective but you have a cover role in the business which you must maintain by not making too many mistakes in your work each day.

By keeping your wits about you as you read the memos that require replies, you should find certain person requesting information that is not strictly in his line of responsibility.

This is your mole and as soon as you are sure you report to the directors and the company is secure again.

There are seven different roles for you to take and you learn a great deal about oil as you play this game. The constant rewinding of the cassette is a pain you need to do this after each part of the game in order to go on to the next part.

Interesting but not as enthralling as I had expected, overpriced too.

★ ★ ★

Loco Motion
BBC/Electron
£6.95

BBC, 35 Marylebone High St London W1M 4AA

All aboard! It's time to get up steam, put your Casey Jones hat on and head out into the wild west as the driver of the cannonball express.

You are given the choice of two games, the first involves making a voyage of discovery through the fifty screens of railway track, collecting gold avoiding outlaws, and dodging runaways trains. The control is simple forward reverse and choose the points. By carefully controlling your speed you can pick up tracks. A variety of items can be found in these, extra bonus parts or best of all gold. Points are awarded for delivering these gold trucks to the bank. Timing you can find the bank.

In the second type of game you are at the helm of a runaway train tearing through the countryside at full speed. Unfortunately this version of the game soon became a little tedious as all you did was the points lever.

Overall I enjoyed the program it offers an opportunity to play a realistic game for a change with a clever use of graphics.

Pantry Antics
BBC
£6.95

It has taken the BBC a long time to realise that it's a computer as well as being used for the playing of arcade games.

This is the BBC's first truly arcade release and I don't think they've got it right yet. This is a mediocre game that wouldn't have been published by the big producers at all.

The aim is to cause havoc in the pantry and you play a rather dull pink mouse. The pantry comprises a number of blue shelves that occasionally have gaps that you can jump or fall through.

This house has creatures that try to stop the mouse in his destructive behaviour. This includes birds, then frogs and bats. All have their own patterns of behaviour that make them particularly difficult to avoid.

The graphical animals are very good but the various bits of crockery that fall off the shelves can only be described as rather boring and even shapeless.

What cannot be avoided is the complete boredom you tend to feel caused by the lack of variety in the game.

Doctor Who and the Warlord
32K BBC
£7.95

BBC 35 Marylebone High St London W1M 4AA

It was with apprehension that I examined this latest offering in the Doctor Who saga. I remember the first Doctor Who adventures in which second rate arcade games were packaged and sold as an adventure. This new program is a real adventure, and a sizeable one. It occupies both sides of the cassette, each half of the game being the same length as The Hobbit.

At the start you and the Doctor attempt to help King Vetranger, however you become separated from the Doctor and must carry on alone. From here on the story tends to become a little gory. Within the first 10 minutes I had died a thousand horrible deaths. Once I had both my arms and legs broken and was left to die. I think I would have prefered it if the BBC had stuck to good clean zapping and blasting.

A comprehensive vocabulary can be employed. Sentences such as 'Give the scroll to the Doctor' are allowed. It is this flexibility of language combined with a complex plot that are the strengths of the adventure.

It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print on posters or in the cinema.

Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and warrant your complaints.

If you're not sure about which ones they are, however, drop us a line and we'll send you an abridged copy of the Advertising Code.

Then, if an advertisement bothers you, you'll be justified in bothering us.

The Advertising Standards Authority
If an advertisement is wrong, we're here to put it right.

ASA Ltd, Dept 2, Brook House, Torrington Place, London WC1E 7HN

This space is donated in the interests of high standards of advertising.

You could be on our pages

We welcome programs, articles and tips from our readers. If you feel that your work meets our standards, please submit it to us for consideration for publication.

- **Programs must always be sent on cassette. Listings are helpful, but not necessary. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.**
- **Articles on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.**
- **Tips are short articles, and brief programming routines. Your hints can aid other computer users.**

All submissions will be acknowledged and the copyright in such works which will pass to Argus Specialist Publications Ltd will be paid for at competitive rates.
Keep a copy of your work and include an SAE. Label everything clearly and give a daytime and home phone number if you can.
All work for consideration should be sent to:

Paul Liptrot, Home Computing Weekly, No.1 Golden Square, London W1R 3AB

Waste of time

With regards to David Tomkinson's letter (HCW 88) I also sent for the Texas tape and to become a member of the club I waited about two months and got fed up

I got the owner's phone number and rang him I then waited another two months and phoned again The man told me he had sent it to me After my third phone call I finally got the tape, but it wouldn't load I phoned the owner again and he told me to send him one of my tapes which he would return to me

I sent him a tape but haven't had the tape back I have been waiting about three months now

I think this club is a waste of time This is at the same address, 41 Winchester St, London I wish something would be done about this

R Harvey, Nuneaton

Texas moan

Firstly I would like to congratulate you on producing a first class magazine Every bit is worth reading I have been an HCW reader ever since the first issue was produced when I first had my TI 99/4A and I am glad to see it improving every issue

However, to get to the main reason for me writing this letter we Texas owners have been deprived of the limelight our computer deserves especially after the damnation of that little plastic piece of junk called a Spectrum This is where the first of my criticisms comes in

In one issue of HCW there were three considerably lengthy programs printed for the enjoyment of Spectrum owners but not one for the TI-99/4A, not even a software review So I had spent 45 pence on a magazine that wasn't much good for me, except for the odd useful advertisement!

I would like to see more Extended BASIC programs in your magazine — which don't require joysticks as we don't all have this small novelty — and more software reviews for the Texas Why not try reviewing the many new cartridges released by Texas Instruments and Atari, such as Buck Rogers, MASH and Jawbreakers which all have breathtaking titles, but are the games just as good?

Imagine buying one of these cartridge games which retail in the region of £16 to £30 each (expensive aren't they you Spectrum owners!) only to find the game's a flop

I also think it would be a good idea to have more peripheral reviews for the Texas This computer is way ahead of the Spectrum in technology There are many peripherals available for the Texas which the Spectrum and other computer would like to get their own run RAMs and ROMs on This is one thing we can boast about so take note you downhearted Texas owners I haven't seen one review of the MB Voice Recognition system in any magazine yet

Finally when there have been Spectrum users conventions I have seen big glossy centre spreads about it in HCW There was a TI-99/4A computer exhibition in November which was advertised in HCW, but what happened there? I haven't even seen it mentioned since then

Darren Purdy, Langley Mill

This is an old but still thorny problem But the fact is that there are more Spectrum users than anything else We can't please all the people all the time — but we do try our best and we support the TI as fully as we can

TI wizard

In the 94 weeks I have been reading your magazine I have read quite a lot of letters from your readers Some with delighted interest some unfortunately with disgust I can't understand the many TI users who write in and complain about their computer I have had my TI 99/4A for more than two years and I have never wanted to compare it with a BBC or any other machine for that matter

When the time comes that I have to complain it will be time to get another computer I bet the users who write in haven't seen the full capabilities of their downcried TI I agree that when using the TI console on its own, it leaves much to be desired but with the right hardware and software which obviously these users haven't got, the TI-99/4A is a very good computer

The TI speech synthesiser is the best I have ever heard

How many home computers do you know which can sing or read out their own listings? With the Music Maker module the TI can play anything from the Beatles to Beethoven

Together with Alan Frew one of our local TI wizards, I formed the Maltby TI users club Although I have had some details published on your Letters page I feel your readers may like to know that there have been a few changes in the past couple of months The club now produces a monthly newsletter, offers a 10 per cent discount off modules and hardware and up to 20 per cent off cassette software from most leading TI dealers

Subscription for 12 months is split into two groups £10 for users who live close enough to attend our regular monthly meetings £6 for postal members We meet on the second Tuesday of every month in a local pub's back room The meetings are just for TI users and usually there are five or six computers set up Our meetings give users the opportunity to see what their computer is capable of

For further details please write enclosing an SAE to the following address

Mark Lee, Maltby TI users club, 89 Rutherham Rd Maltby, S Yorks S66 8LZ

Thrash your micro

I'm writing to find out if anyone has thrashed the computer on Match Day for the 48K Spectrum The lowest the computer has scored against me is 2-1 and 1-0 I was leading 1-0 in the first half but the computer scored two last 15 minute goals and to the other match the computer scored a last five minute goal

I think Match Day is great You can see the players run on to the field So, how have other readers done?

Andrew Musgrove, Ipswich

Gallup confusion

Your proudly published Gallup software chart of December 31 is, we are told, the one to believe in

What isn't clear is the unexplained list of eight columns showing various micros If this is the popularity chart I find it cannot be believed as it doesn't correspond with Gallup's own published charts

The conclusions must be the availability of each of the top 20 on other micros but if this is so, the chart also can't be believed as both Blue Max and Beach Head are available for the Atari, yet these aren't shown

I suspect that once again the market researchers are omitting details which leaves the reader with the option of interpreting the facts any way he or she wishes Please explain

Michael Ayland, Gloucester

We're confused about your letter Where else do you see the Gallup chart and deduce ours is wrong? We take a regular weekly chart which comes to us direct from Gallup and isn't altered in any way

Incidentally only Blue Max is available on the Atari, according to US Gold Beach Head isn't As far as we can be humanly certain, the chart is credible and accurate It's not devised from distributors' figures but from high street sales We believe it's the most trustworthy chart

Machine code needed

I get your magazine every week and I think it's great I own a TI 99/4A and I'm glad you're continuing to print programs for it, which, on the whole, work well and are great fun

Can anyone tell me where to find a book on machine code or assembler for the TI? I can't find one anywhere

George MacRae, Rhirgowrie

Stuck on Pirate's Isle

I am nearly going mad I own a TI 99/4A and I was given a game at Christmas, Return to Pirate's Isle The cover price was £20, which works out at nearly £20

When I play the game I get so far and then I come across a sign saying Keep out and Sorry to explore Pirate's Isle you'll need adventure number two

This game is adventure number 14 and all the people I know who own a TI haven't got adventure two

Anyone who has got adventure number two, please write to me before I go mad!

Kathleen Gaffney, 51 Gotham Rd, Yardley, Birmingham B26 1LB

Live on Daley!

I am a very proud Spectrum owner and I am hoping you will this letter about a big, on Daley Thompson's Decathlon which gives you infinite lives

To do this you must get 168 96 metres on the discus This is done by letting the discus go on the first turn at 36 degrees, when the man is facing directly out of the ring

If the speed is in the second block the discus should go through the screen twice and land in the crowd

Your lives will then go down normally but when your final score comes up instead of going to the start of the game it will go back to where you left off

Neil Rands, Andover

Send your letters to Letters Home Computing Weekly 80 Golden Square London W1R 3AB Don't forget to name your computer — the best letter could win £5 worth of software See a problem with your micro? We'll soon be starting a queries page so send your technical questions to Queries at the above address

BMX Number Jump C64

Longman Software, Longman Hse Burnt Mill, Harlow, Essex CM20 2JE

This is an educational program aimed at giving the six to ten year-old age groups experience with the basic number skills to attract the attention of this age group Longman have used the current fad of BMX as their focal point The child chooses a difficulty level and the game commences

He must ride his bike around a maze like course avoiding mutant kangaroos which want to push him off At the side of the screen is a sum whose answer is displayed on one of the gates in the maze The bike rider has to be manoeuvred over the correct answer gate at which point the kangaroo disappears, a new sum and kangaroo appear and the game continues The skills tested in this program are addition, subtraction multiplication and division

The ideas behind this game are sound and in terms of screen presentation it is good I found that I didn't have the instantaneous control of the bike I would have liked Consequently the game gave a high failure rate — not desirable in an educational game Failure not because of a wrong answer, but by reason of sluggish controls, may result in the game being left on the shelf

Magazine Bibliography BBC B £10 per part

McHugh Enterprises 43 Hook stone Oval, Harrogate N Yorks HG2 8QE

If you are a serious computer user you are likely to read a large number of magazines Problems arise when you need a particular article but can't remember which magazine and which issue it was in! This product is an attempt to keep you up to date with the happenings in all magazines containing references to the BBC

The bibliography was started in December 1981 and has been kept up to date Each program has about a thousand references and can be searched in minutes If you have more than one part on a disc, it will load that section and carry on the search

What disappointed me was that the programs don't use random access each reference is contained in a DATA statement and it is these that are searched

Having said that the programs are very useful and can save hours of work The two string search facility is good and this enables you to find only graphic articles in one magazine which can make life much more simple

Get those cogs whirring!

Programs to make you think, assessed by our team of experts

Bridge Player Amstrad CPC464 £9.95

CP Software, 2 Hawthorne Rd, Leeds LS7 4PH

The future of computerised card games is assured high ratings if the excellent standard set by this one is maintained

The rules are not included nor need they be A huge literature, devoted to the method and skills of Bridge, fills the shelves of your library or bookshop

The game is incorporated within three main screens, using well chosen colours and graphics that are adequate even on a Green Screen Monitor

The bidding screen, the purpose of which is to establish the trump suit, accepts both Gerber and Stayman conventions

The playing screen depicts the four hands in play, with the north/south partnership's cards revealed

Around the perimeter are an indicator to show the lead hand and trump suit and a count of the tricks won and a pointer to the winning card which determines the next lead

A boon to the less experienced player is the scoring screen This computes the scoring system for each hand

Control is through the keyboard simply explained on the cassette inlay along with details of the bidding

Exman 64 C64 £7.99

Interceptor Linton Hse The Green Tadley Hants

Exmon 64 is a machine code utility for the C64 It comes in a smart package with the statement "a full user manual is included..." The six page manual only gives a brief description of each command The manual won't teach you how to program in the 6510 machine code a prior knowledge is required in order to use this utility

The utility is fairly easy to use providing a black background with white lettering However I felt the extra commands required to edit the machine code add an unnecessary complication to the process of changing instructions

The use of the transfer command is incomplete without a relocation command but it is possible to read edit and write a block to disc This is useful when trying to recover data on the 1541 disc Another useful function is the ability to call the registers and change them directly

In all Exmon 64 will enable the user to write machine code programs in a limited way and has a good set of disc maintenance commands

Pitman Typing Tutor Amstrad CPC464 £9.95

Amsoft 169 Kings Rd, Brentwood, Essex

This educational program starts with several explicit pages of instructions

Clearly and concisely explained is the method adopted to improve the speed and accuracy of your typing skills

As a forerunner to the main program these herald an expertly designed series of practical keyboard exercises

Each lesson requires you to copy type a series of letters which are seen flashing on an imitation keyboard display on the screen

The second part of each lesson displays a list of short phrases, each incorporating the letters previously learned Again these have to be copied

Your skills are then measured and a mark is given for both speed and accuracy Also shown is the suggested minimum standard required, before moving on to the next more advanced lesson

The screen presentation is good, tastefully using a variety of inks and pens, to brighten and enhance what could easily have become a rather lifeless display. A thoroughly useful program that can only serve to achieve it's objective

Looking forward to more proof that learning can be fun, especially in the home environment

TI-99/4A Cassette Software

Which UK Software House:
Has supported TI99/4A Owners longer than any other?
Has received more 5 Star reviews in Home Computing Weekly than any other TI supplier? (Hint: 25)
Sells not only games, but also handy utilities?

STAINLESS SOFTWARE

As seen on TV:
Have you seen the Golf and Bowls on tv? I have excellent TI Basic simulations for just £6.00 each. HCW gave them both 5 Star reviews! *****

Modest packaging, great programs, reasonable prices... for a classic computer.

LOTS MORE PROGRAMS FROM THE TI SUPPLIER WITH MORE FIVE STAR REVIEWS THAN ANY OTHER!
